Volume 3

Style Design Innovation

EAC is your #1 source for custom-made components! With many years of experience in the architectural industry along with our desire to craft innovative creations, our team of experts can help turn your designs into reality!

Euro Architectural Components (EAC) is Canada's largest distributor of architectural components for the railing and fence industries. EAC strives to remain at the forefront of evolving trends and technologies while bringing innovations to our valued customers and maintaining the highest quality of service.

EAC is excited to announce many additions to our Stainless Steel collection as our industry continues to be dominated by the popularity of Stainless components in exterior or interior applications for residential and commercial projects.

We are thrilled to introduce a new product line with **Tilt-Lock™ patented technology**, featuring Base Shoe Railing Systems and Spigots, both of which are available in various mounting options. As we constantly expand our collection, we invite you to refer to our website for the latest product updates.

SUPERIOR CORROSION RESISTANCE

ADJUSTABLE GLASS MOUNTING SYSTEMS

The Tilt-Lock™ Adjustable Glass Mounting Systems are available in 4 models to suit almost every possible mounting requirement for glass 12-17.52mm thick.

The clean architectural lines create a unique facade, providing a very cost-efficient modern solution for structural glass railings.

The no-holes-in-the-glass system allows the glass to be easily adjusted using the pressure on the screws to ensure a perfect installation every time and results in a stronger, more reliable system.

PRODUCT FEATURES

- Top Mount, Side Mount, and Edge Mount Models.
- Duplex 2205 construction in satin finish.
- Suitable for **12-17.52mm** glass.
- Allows for glass to be tilted 2° backward or forward.
- All adjustments can be achieved from one side.
- **Fully engineered for the National Building Code of Canada.**
- All spigot models have been tested up to 3 kN.
- **Canadian Patent Application No. 2,962,407.**
- **U.S. Patent Application No. 15/024,903.**
- **New Zealand Patent No. 700501.**

CHECK THE CABLERAIL ADVANTAGES

- Attractive, affordable, and very low-maintenance.
- Invisible appearance will not impair views.
- Made from strong and weather-tough type 316 stainless steel cable.
- Can be used on new or existing metal or wood railing frames.
- Simple, fast, do-it-yourself installation using pre-fabricated assemblies.
- Special easy-to-use fittings are hidden in the end posts.
- Made from over 70% recycled materials.
- Versatile uses: railings, trellises, fences, exterior, interior, residential, commercial.

10 YEAR WARRANTY

Feeney Inc. warrants that all CableRail® stainless steel cable and connectors shall be free from defects in material and workmanship under normal use, conditions, installation, and maintenance in accordance with product specifications for ten years from date of purchase. The complete text of this warranty is available upon request.

CABLE ASSEMBLY CARE & MAINTENANCE

The protective chromium oxide film on the surface of stainless steel gives it superior corrosion resistance. Properly maintained stainless steel provides excellent luster, strength, and durability. In most applications, stainless steel will not rust or stain even after many years of service, but it is NOT rust or stain proof. When stainless comes in contact with chloride salts, sulfides, or other rusting metals, it can discolour or even rust and corrode. With proper care and maintenance, however, stainless steel can remain beautiful and functional for years to come.

- *Clean stainless with soap and warm water. Never clean with mineral acids or bleaches.*
- *Never use coarse abrasives like sandpaper or steel wool on stainless. Use synthetic Scotch pads instead.*
- *Never leave stainless in contact with iron, steel, or other metals. This can cause rust spots or corrosion.*
- *Always remove stains or rust spots as soon as possible with either soap and water or a brass, silver, stainless, or chrome cleaner.*
- *Periodically inspect cable assemblies for proper tension and re-tension as necessary. This is important.*

DETERMINING WHAT YOU'LL NEED

1. **CAREFULLY REVIEW:** Read all of the product descriptions, installation instructions, and frame recommendation pages in this catalogue. Contact us should you have any inquiries.
2. **SECTION FRAMES:** Divide your railing frame into sections by determining which corner and end posts will be the cable termination posts. Remember that straight runs should not exceed 50 feet and runs with bends (2 corner bends at most) should not exceed 40 feet.
3. **DETERMINE LENGTHS:** Measure the outside lengths of each of your sections from step 2 and select the cable assembly lengths that will fit each section. Be sure that the assemblies are at least 1 foot longer than the length of the section.
4. **CALCULATE QUANTITIES:** The number of assemblies depends on your railing design. Remember that each horizontal cable is a separate assembly and that the cables should not be spaced further than 3 inches apart. Calculate the quantities needed for each of your assembly lengths.
5. **CHECK ACCESSORIES & TOOLS:** Count up all the end caps, protector sleeves, beveled washers, cutters, lacing needles, drills, saws, and abrasive discs you may need (see Tools Checklist on the Installation Instruction pages).
6. **FILL YOUR ORDER:** Visit our office locations to take a look at our CableRail® display and order in person or online via our website: **euroeac.com**.

EASY TO INSTALL

PRE-FABRICATED CABLE ASSEMBLIES are an attractive, budget-friendly, and low-maintenance alternative to commonly-used metal and wood picket infill. Assemblies use 1/8" diameter high-strength, weather-tough type 316 stainless steel cable and come in a wide range of standard lengths that can be quickly trimmed to size in the field. Each assembly includes special, easy-to-use Threaded Terminal and Quick-Connect®SS end fittings that remain concealed in your end posts. The result: an extremely durable, virtually invisible railing infill that leaves the view open and unimpaired.

CABLE ASSEMBLIES

Everything you need for your basic cable project is listed in this section. Choose your assembly lengths, a preferred style of end cap, accessory items, and you're good to go.

Each assembly includes the selected length of 1/8" diameter type 316 stainless steel cable with a Threaded Terminal fitting pre-attached to one end, one stainless steel Quick-Connect®SS fitting, two flat washers, and one stainless steel Snug-Grip® Washer-Nut.

CableRail® Assemblies are designed to be used on your own metal or wood frames in either interior or exterior settings.

STEP-BY-STEP INSTALLATION FOR METAL FRAMES

INSTALLING THE STANDARD 1/8" CABLE SYSTEM IS EASY. JUST FOLLOW THESE SIMPLE STEPS:

TOOLS CHECKLIST

- ☐ Safety Glasses
- ☐ Work Gloves
- ☐ Pencil
- ☐ Measuring Tape
- ☐ Electric Drill
- ☐ Drill Bits
- ☐ Hammer
- ☐ Cable Cutters
- ☐ Vise-Grip Pliers
- ☐ 7/16" Wrench
- ☐ Electric Grinder with Grinding Disc & Cut-Off Disc
- ☐ Hacksaw or Electric Reciprocating Saw
- ☐ Cable Lacing Needle
- ☐ Feeney Tension Gauge

IMPORTANT NOTE:
If using electric or pneumatic tools to tighten the Washer-Nuts, spin the nuts very slowly; otherwise, they will heat up, causing the threads to seize.

Mark drill hole locations on posts.

To minimize cable deflection, space cables no more than 3 inches apart and have a post or vertical spacer at least every 3 feet. Also, straight runs of cable (no turns/dips) should not exceed 50 feet. Runs with corners (2 bends at most) should not exceed 40 feet. See Metal Frame Requirements on opposite page.

Drill holes in posts. Hole diameter depends on cable size and type of fitting. See below.

Cable Size	Threaded Term. Post	Intermediate Posts	Quick-Connect Post
1/8"	5/16"	1/4"	3/8"

If desired, Quick-Connect®SS posts may be through-drilled at 1/4" and then counterbored with the recommended Quick-Connect®SS drill to countersink the fitting.

If using Isolation Bushings or Grommets (optional), insert them into their corresponding post holes.

Note: If using Isolation Bushings, call for special drill hole sizes.

Insert the Threaded Terminal through the Terminal end post and attach a flat washer and Snug-Grip® Washer-Nut. Spin the nut 2 full turns. Strong resistance will be felt as the Snug-Grip® threads engage, so hold the Terminal shaft with pliers.

Use Beveled Washers for stair termination posts with angled holes. Available for Threaded Terminal and Quick-Connect® SS fittings. Always install the Quick-Connect® SS fittings in the top stair post to prevent rain water from running down the cable into the fittings.

Lace the free end of the cable through the intermediate posts and Quick-Connect®SS end post. Slide on a flat washer and Quick-Connect® SS fitting until they rest against the face of the post. Use a Lacing Needle if snagging becomes a problem.

Hold the Quick-Connect®SS fitting with one hand and pull the cable tight with the other. The fitting automatically locks when you release the cable.

Tension the cables by holding the Threaded Terminal shaft with Vise-Grip pliers and spinning the Snug-Grip® Washer-Nuts with a wrench. A Feeney Tension Gauge may be used to check uniform tension.

See tensioning sequence diagram at bottom left.

Use hacksaw, reciprocating saw, or electric grinder with cut-off disc to saw off the excess threads as close to the Snug-Grip® Washer-Nut as possible. Touch up with electric grinder. The special Snug-Grip® threads prevent the nut from loosening.

Use cable cutters or electric grinder with cut-off disc to trim the excess cable. Grind flush the exposed cable ends with an electric grinder.

Snap on end caps over the exposed Quick-Connect®SS fittings and the Snug-Grip® Washer-Nuts. You're done.

SSCLEANER can be applied for lasting protection of stainless steel cable and parts.

METAL FRAME REQUIREMENTS

FRAMES NEED TO SUPPORT THE TENSION OF PROPERLY INSTALLED CABLES.

They need to be designed and built strong enough for the end and corner posts to support a load in excess of 300 lbs. for each cable. Here are some basic guidelines to help you prepare your railing frames for cable infill.

MINIMUM SIZES FOR ALL CORNER AND END POSTS

All other posts should be sized as required for cap rail support strength or for code.

FLAT BAR
2" wide, 1" thick

ANGLE IRON
2" wide, 1/2" thick

EXTRA STRONG PIPE
1 1/2" ID, 1 7/8" OD

SQUARE TUBE
2" wide, 1/4" wall

THE BASIC FRAME DESIGN

AND SOME OTHER OPTIONS

VERTICAL SPACERS (OPTIONAL):

Slender spacers may be used instead of some of the larger intermediate posts to achieve a more open railing design. These are non-structural members and are only intended to maintain cable spacing and minimize deflection. Examples are 1" metal tubing or 1/4" flat bar. Attach spacers to the cap rail and either the foot rail, deck surface, or joists.

FOOT RAILS (OPTIONAL):

Foot rails should be spaced no more than 4 inches above the deck surface, or as required by local code, and should be sized as needed for support strength and design appearance.

SINGLE CORNER POST (OPTIONAL):

In most cases with single corner posts, cables must be terminated. Exceptions are angle iron posts or tubular metal posts. When terminating on a single corner post, be sure to offset the drill holes at least 1/2" to allow internal clearance for the cable fittings. Use minimum end post sizes noted above and securely bolt or screw to joists or deck surface.

IMPORTANT NOTE

For railings, we recommend spacing the cables no more than 3 inches apart and placing posts or vertical members no more than 3 feet apart.

Please note that since building codes vary by province and city, our recommendations may not comply with code requirements in all areas.

Always consult with your local building department before starting your project.

CONSTRUCTION CHECKLIST

- ☐ Space cables maximum 3 inches apart
- ☐ Space posts/verticals maximum 3 feet apart
- ☐ Observe minimum end/corner post sizes shown above
- ☐ Securely fasten all posts and cap rails
- ☐ Carefully plan all termination and corner posts for proper clearance, positioning, and maximum cable run lengths
- ☐ Straight runs of cable (no turns/dips) should not exceed 50 feet; runs with corner bends (2 bends at most) should not exceed 40 feet

1

Mark drill hole locations on posts.

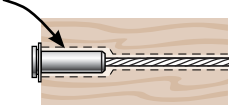

To minimize cable deflection, space cables no more than 3 inches apart and have a post or vertical spacer at least every 3 feet. See Wood Frame Requirements on opposite page.

2

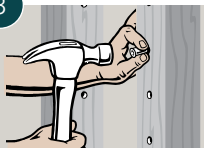

Drill 5/16" holes in one end post for the Threaded Terminal fitting, 3/8" holes in the other end post for the Quick-Connect® fitting, and 1/4" holes in all other posts.

If desired, the Quick-Connect® posts may be through-drilled with a 1/4" bit and then counterbored to 1 1/2" deep with a 3/8" bit to countersink the fitting.

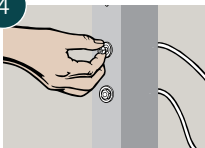

3

Insert Protector Sleeves at necessary locations. Tap in until flush.

See Special Parts section below.

SPECIAL PARTS FOR SPECIAL SITUATIONS

Use Beveled Washers for stair termination posts with angled holes. Available for both Threaded Terminal & Quick-Connect® fittings. Always install the Quick-Connect® fitting in top stair post to prevent rain water from running down the cable into the fitting.

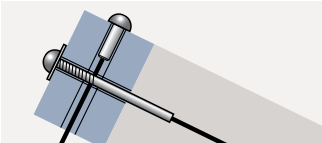

Protector Sleeves prevent abrasion at angled transitions on wood posts (e.g., stair transition posts or outside faces of double corner posts). Fits 1/4" diameter drill holes.

They need to be designed and built strong enough for the end and corner posts to support a load in excess of 300 lbs. for each cable. Here are some basic guidelines to help you prepare your railing frames for cable infill.

MINIMUM POST SIZES

End and Corner Posts: The end and corner posts are the cable termination/transition posts and support the full load of the taut cables; therefore, the minimum recommended size for these critical posts is standard 4x6 wood.

Intermediate Posts: The remaining intermediate posts do not support any tension load since the cables pass straight through, so they can be sized as required for cap rail support or for code.

4x6 WOOD
3 1/2" wide, 5 1/2" thick

VERTICAL SPACERS (OPTIONAL):

Slender spacers may be used instead of some of the larger intermediate posts to achieve a more open railing design. These are non-structural members and are only intended to maintain cable spacing and minimize deflection. Typical examples are 2" x 2" wood strips, copper tubing, or Feeney Intermediate Pickets (see accessories on page 30). Attach them to the cap rail and either the foot rail, deck surface, or joists.

FOOT RAILS (OPTIONAL):

Recommend minimum 2x4 size wood spaced no more than 4 inches (or as per code) above the deck surface.

IMPORTANT NOTE

For railings, we recommend spacing the cables no more than 3 inches apart and placing posts or vertical members no more than 3 feet apart.

Please note that since building codes vary by province and city, our recommendations may not comply with code requirements in all areas.

QUICK-CONNECT® CABLE HARDWARE

We've taken our automatic-locking-jaw design from our original Quick-Connect® fitting and applied it to an entire line of cable end fittings. Now, you can select from a wide variety of sleek and versatile cable end fittings that offer the flexibility of assembling cables in the field and the simplicity, speed, and gripping power of our Quick-Connect® jaws: no more cumbersome crimp tools or time-consuming wedge-type compression fittings. Simply trim your cable to length, push the end into the Quick-Connect® fitting, and the spring-loaded jaws automatically engage. You're ready to go! Made from marine grade 316 stainless steel for weather-tough durability, low maintenance, and lasting beauty. Fittings also come with a silicone protection seal pre-inserted into the end, providing added protection against dirt and debris entering the body of the fitting. If necessary, a reusable release tool is available to disengage and remove or readjust the fitting (see SSCBRT18 on page 30).

2 TYPES OF QUICK-CONNECT® FITTINGS

1 FIXED END FITTINGS

- Non-adjustable end termination fittings, sometimes referred to as "dead ends."
- Have no tensioning capabilities.
- Each Fixed End Fitting must be paired with at least one Tension Adjustment Fitting.

2 TENSION ADJUSTMENT FITTINGS

- Include Turnbuckles and Swivel fittings that are used to tighten the cable lines.
- Tension is adjusted by spinning the tubular body on the Turnbuckles and Swivel fittings.
- Tension Adjustment Fittings can be paired with either a Fixed End Fitting or another Tension Adjustment Fitting.

- Fits into a hole drilled in end post, and the lip rests against the outside post face.
- Design allows the cable to pass entirely through the fitting in one direction only; any excess cable is trimmed.
- Use beveled washers (SSCBW3834 or SSCBBW93234 on page 30) for angled stair termination and flat washers for added bearing surface on wood posts.
- Exposed end is covered with coloured end caps (SSCBECBL, SSCBECBR, or SSCBECWH on page 29) or stainless end caps (SSCBECSSDO or SSCBECSSCH on page 29).

The swivel line of turnbuckles have a special swiveling body that's integrated with the Quick-Connect® fitting, creating a shorter overall turnbuckle design with a sleek appearance and fewer exposed threads. Machined flats allow wrenches to securely grip and spin the body to adjust tension without marring the polished surface. Swivel turnbuckles are perfect for short to medium-length cable runs.

THE COMPONENTS ABOVE CAN BE ASSEMBLED IN VARIOUS COMBINATIONS.

A photograph of a modern staircase with dark wood treads and glass railings. The railings are held in place by metal clips and gaskets. The background is a light-colored wall.

ZAMAK is a family of alloys with a base metal of zinc and alloying elements of aluminium, magnesium, and copper. The addition of copper and magnesium provides it with diverse properties and allows it to cast. Zamak alloys exhibit an excellent combination of cost, strength, ductility, impact strength, and finishing characteristics. Recommended for interior use.

EVERBRITE PROTECTIVE COATING

- Has more UV blockers and anti-oxidants in it than ProtectaClear.
- One-part coating; no mixing, no waste.
- Has UV protection to protect painted metals from fading and chalking on **painted or exterior metal**.
- Remains flexible; will not crack, chip, or peel when garage doors roll up and down.
- Protects from fading and oxidation; has additional UV protection to protect exterior metal from tarnishing.
- Will seal rusted metal: bronze sculptures, architectural metal, or other metal.
- Will not yellow; remains crystal clear.
- Self-levelling: application marks level out.
- Excellent adhesion on metal, even polished metals.
- Self-annealing: will blend to itself so repairs are easy.
- Will last 4-5 years if cleaned properly and 2 coats applied.

EVERBRITE USES

- Painted Metals: Metal Sidings, Storage Doors, Metal Roofs, Garage Doors, and Gutters.
- Metal Buildings: Sheds and more.
- Garage Doors or Storage Roll-up Doors.
- Copper Gutters.
- Copper Roofs.
- Cupolas.
- Finials.
- Weathervanes.
- Fiberglass.
- COR-TEN® Metals (Rusty).
- Interior Metals: Brass, Copper, Bronze, and Zinc.

PROTECTA Clear™

An Everbrite Coating

PROTECTACLEAR

- Is thinner, tougher than Everbrite Protective Coating; solvent-based.
- Designed for use on **unpainted metal**.
- One-part coating; no mixing, no waste.
- Has excellent salt and chlorine resistance and superior adhesion to **stainless steel and polished metal**.
- Has extra salt protection for marine applications or coastal environments or metal around pools.
- Is more scratch-resistant than Everbrite Protective Coating.
- Remains flexible; will not crack, chip, or peel.
- Will not yellow; remains crystal clear.
- Self-levelling: application marks level out.
- Excellent adhesion on metal, even polished metals.
- Safe for use on jewellery or in kitchens. Food safe after cured.
- Self-annealing: will blend to itself so repairs are easy.

PROTECTACLEAR USES

- Unpainted Metals: Railings, Doorknobs, or Kickplates.
- Unpainted Metals (Marine): Stainless Steel, Brass, Copper, etc.
- Jewellery: Copper, Brass, Silver, Plated Metals, and more.
- Stainless Steel or other metals around pools; e.g., sculptures.
- Engine: Motorcycle Parts, Wheels, and any Boat.
- Interior Metals: Brass, Copper, Bronze, and Zinc.

EVERBRITE & PROTECTACLEAR COATINGS

STAINLESS STEEL CLEANING

ADDITIONAL EVERBRITE CLEANING PRODUCTS

EZ PREP CLEANER & NEUTRALIZER (SSEVACC1 - 4 oz. Bottle)

- Highly concentrated, biodegradable, free-rinsing cleaner and neutralizer; emulsifies.
- Does NOT remove tarnish or rust from Copper, Brass, Stainless Steel, or other Metal.
- Works exceptionally well for cleaning chalky oxidation on Metal Siding, Storage Doors, or other Painted Metal.

HD COPPER CLEANING GEL (SSEVACC2 - 16 oz. Jar)

- Environmentally friendly, heavy-duty Copper Cleaner. Unique solution blended specifically to remove tarnish and oxides from Copper-based Metals.
- Use on Copper Roofs (will cling), Gutters, Hoods, Fireplaces, and other Copper that is difficult to clean.

MAAS METAL POLISHING CREAM (SSEVACC3 - 2 oz. Tube or SSEVACC4 - 4 oz. Tube)

- Concentrated MAAS polishing cream contains a powerful wipe-on, wipe-off formula that instantly removes years of residue, rust, and oxidation from all metals and more. Just a dab polishes large areas.
- Fast - Easy - Handles the toughest jobs, yet gentle enough for delicate antiques.
- Does NOT contain any acid, so there is NO neutralizing necessary before coating with ProtectaClear.

STAINLESS STEEL RUST REMOVER (SSEVACC5 - 8 oz. Bottle)

- Non-abrasive cleaner for cleaning Stainless Steel to remove rust, tea-staining, and iron deposits.
- FREE of Oxalic Acid - uses new technology. Very quick and effective.
- Thickly foams, so it clings - easy to use. Easily applied by brush or spray.
- Stays wet for a long time. Leaves surfaces clean, streak-free, and shiny.
- Effective in hard or soft water. Does not form white deposit with hard water.

Flowdrill®

A flowdrill is a lobed, conical tungsten carbide tool. When rotated at high speed and pressed with high axial force into sheet metal or thin walled tube, generated heat softens the metal and allows the drill to feed forward, produce a hole and simultaneously form a bushing from the displaced material.
