

# Instructions:

- 1. Consult with municipal by-law about the required minimum height of the self-locking gate latch.
- 2. Install the friction fit latch to the glass panel by tightening the pre-installed grub screw. (No glass cut-out or holes in the glass needed!)
- 3. Allow 3mm [1/8"] latch distance or 18mm [23/32"] glass edge distance.
- 4. Align the holes of the lockable side pull magnetic gate latch to the tapped holes on the friction fit latch and fasten using the included M6 screws.
- 5. Once the latch is secured, install the included plastic covers of the latch to conceal the screws.
